-  Installing XAMPP on Windows 109 min
-  Installing LAMP On Linux10 min
-  **Discussion Prompt:**  
Your Database Experience5 min

Optional Assignment

Bonus Materials

We don't have a video about how to install the software on Linux since there are many different Linux systems and most Linux users already know how to install software. In the Linux world, what we call "MAMP" or "XAMPP" is called "LAMP". Actually LAMP came first and the XAMPP / MAMP names are homage to the original Linux / LAMP.

A simple approach is to search for "How to install LAMP on Ubuntu" - You should find lots of pages. If we find good guides, we will list them here:

- [Ask Ubuntu: How to set up a LAMP stack](#)
